The Rise of Centurion. Everything a Towboat Can Be.

The Rise of Centurion begins with the elevated RS flagship series. Shaped by the collective insight of owners, riders, dealers and engineers, the RS230, RS245 and RS265 are the highest expression of performance, convenience, luxury and style in Centurion's 51-year history.

The RS Series

The Rise of Centurion

When you ask real riders what they want, listen, and then build it, the results are remarkable. That's why the RS230, RS245 and RS265 have become the true flagship series of Centurion towboats.

You can see it from the trailer to the wave. A heavier, surf-optimized Opti-V Hull throws a long, powerful wave, handles with confidence and delivers an incredibly smooth ride. The Stacked Dash System with Sunny View 360 by Marivue puts every control within quick view and easy reach. On the inside, premium comfort, expanded specific storage and refined styling give the whole crew room to settle in. The little touches you didn't know you needed, like the Bench-to-Back Multi-Position Slide Seat, surprise and delight at every turn. RS stands for Relentless Significance because it will mean the world to you and your family. Listening is our superpower. Executing is our strength. The RS Series is the result of both.

Key Features RS Series

The Stacked Dash System by Marivue elevates the view from behind the wheel. Dual curved panoramic displays put surf settings, stereo, mapping, ballast, switching, speed control and five camera views exactly where you want them.

Sunny View 360 by Marivue can show five camera views at once or stitch four camera feeds into a 3D view. The Sunny View 360 gives you confidence docking, picking-up a rider and being fully aware of your surroundings. Four integrated Bumper Pockets hold large 20.5-inch fenders and dock line secure, organized and out of the way. The location of this storage allows for quick deployment. With standard Bumper Cleats, the newly designed Pull-Up Cleats are now reserved for dock line. Docking is now the easiest part of your day.

Key Features RS Series

The next-generation RS Opti-V Hull offers more displacement, so it takes less ballast to build world championship level waves.

With RAMFILL Boosted cutting fill times in half, less time filling means more time riding. The Bench-to-Back Multi-Position Slide Seat by Protomet glides into multiple positions or converts to a rear-facing backrest, so you can comfortably watch every ride. Overhead, the available DIRECTFIRE Quad Sound System by Roswell sends crisp, powerful sound behind the integrated Predator Power Tower, keeping the party going from the lounge to the surfer. Up front, the Bow Lean-Block adds a forward-facing bow seat, then folds down to reveal a GatorStep walkover for boarding the RS from the front.

Construction RS Series

For 2027, the industry-leading Opti-V Hull has been significantly elevated for even more remarkable performance. We’re proud to take you behind the scenes of our build process, because the care we put into every boat shows at every step.

Here, an RS245 hull is revealed for the first time, its surface already mirror-smooth thanks to painstaking mold preparation. Before that moment, the Slice gelcoat pattern is carefully taped so every line of your color scheme comes out crisp and clean. Then the all-new Grit Stringer System (GSS) is lowered into place, forming the backbone that makes every Centurion RS hull exceptionally strong and quiet. The GSS also provides the foundation for RAMFILL Boosted in the RS Series models. From the mold to the gelcoat to the stringers, each step is done carefully and by hand, building every Centurion to perfection.

Construction RS Series

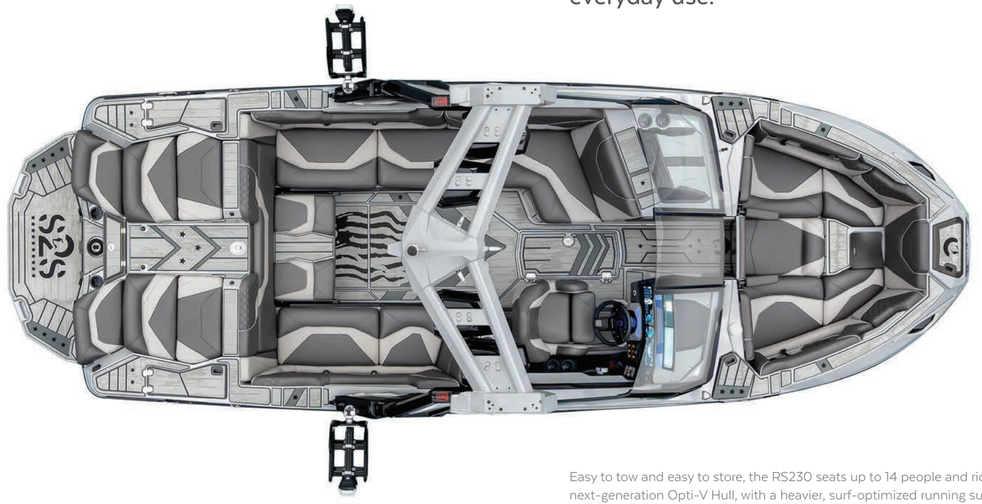
From through-bolting the standard Predator Power Tower to joining the deck and hull in a reverse shoebox fit, every step of production adds to the RS Series' strength and style.

Before the deck and hull are assembled, the Anchor Archive is mounted in the RS to accept the boat's box anchor and accessories. Centurion's Surge Thruster System is standard on every RS model. The Stacked Dash System with Sunny View 360 is activated and calibrated just before Lake Test. Turn the hull over and you'll see what makes the new RS different. The 20-degrees of deadrise created by the deep-v hull is framed by lifting triangles at the rear corners now extending farther forward for added lift and stability. The outside chine has been flattened and widened for improved handling. And a touch more hook at the transom keeps the boat running level even before the Silent Stinger Wake Plate engages, for a smooth ride and longer, pushier surf wave.

The RS230

The RS230 Model

At 23 feet, the RS230 delivers championship-level performance in a package built for everyday use.

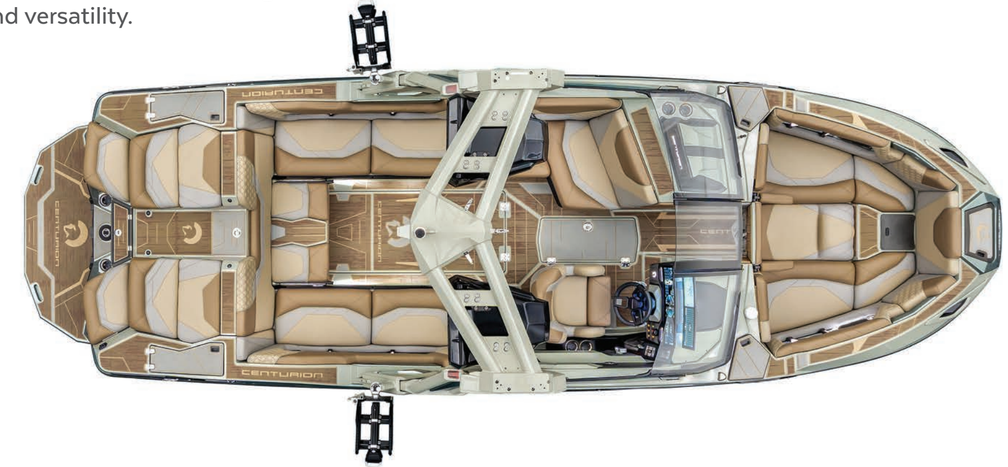


Easy to tow and easy to store, the RS230 seats up to 14 people and rides on the next-generation Opti-V Hull, with a heavier, surf-optimized running surface for world-class waves, balanced wakeboard wakes and a smooth rough-water ride. The overhead view shows just how much boat that is, from the open bow to the generous cockpit and wide surf platform. The smallest of our flagship line still brings premium comfort, intelligent storage and revolutionary technology. Customize it to your exact specifications and build the boat your family will spend its best days on.

Boat Length	Seating Capacity	Fuel Capacity	Total Ballast
23'	14 People	67 Gallons	4800 Lbs

The RS245 Model

Whether you compete or not, the RS245 delivers podium-worthy performance and luxury in perfect balance, blending function, comfort and versatility.



The RS245 is the official towboat of the Centurion World Wake Surfing Championship (WWSC) and the World Series of Wake Surfing (WSWS), chosen for its combination of Centurion's best-selling 24.5-foot size, world-class surf performance, technology, comfort and style. From above, you can see the space that makes it just as right for family days as competition days. The RS245 performs at the highest level of the sport while remaining the ideal choice for families who demand championship capability and elevated comfort.

Boat Length	Seating Capacity	Fuel Capacity	Total Ballast
24' 6"	16 People	92 Gallons	5050 Lbs

The RS245

The RS265

The RS265 Model

The NMMA yacht-certified RS265 redefines the luxury towboat. The largest Centurion yet at 26.5 feet, it is the highest performing towboat ever built.

Boat Length
26' 6"

Seating Capacity
Yacht

Fuel Capacity
92 Gallons

Total Ballast
5250 Lbs

Every inch of the RS265 was designed to maximize comfort, convenience and capability without compromise. The overhead view says it all: wraparound bow seating, a lounge-worthy cockpit and a surf platform with room for the whole crew. Thanks to feedback from the Centurion family, every passenger is surrounded by expansive space, revolutionary technology and premium craftsmanship. And underneath, the next-level Opti-V Hull's balanced, surf-optimized running surface delivers the legendary waves, wakes and ride you expect from Centurion.

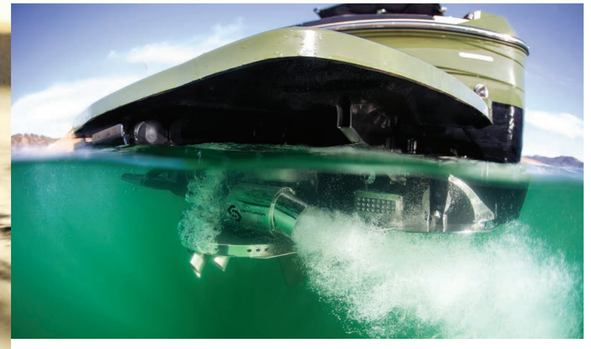
The Ri Series

The Performance You Trust. The Experience You Deserve.

The Ri245 and Ri230 are the top-selling boats in the Centurion lineup because they deliver the waves, wakes and comfort that define the Centurion experience.

Refined through years of real-world feedback, the Ri Series never stands still. RAMFILL Boosted cuts ballast fill times in half, for faster setup and even more time on the water. Built on Centurion's world-renowned Opti-V Hull and topped with the standard Saber Auto Tower, upgradable to the Maneuver Auto Tower or the Predator Power Tower, the Ri Series is crafted for enthusiasts who demand a tailored experience. Choose the model that fits your family, then customize it into the ideal boat built just for you.



Key Features Ri Series

Thanks to RAMFILL's high-performance scoop, recessed into the Opti-V Hull, and RAMFILL Boosted's high-output 30-gallon-per-minute SeaFlo pumps in each RAMFILL tank, you'll spend less time waiting and more time riding.

RAMFILL Boosted cuts fill time in half, so you're ready for the next set sooner. Below the waterline, the new optional Centurion Sit Step makes getting in and out of the water easier and doubles as a great place to sit and cool off. And the Centurion Surge Thruster System (STS) by ezDrive gives you fingertip control in tight spaces with 87% more thrust than typical 2-horsepower systems. Whether you're easing into a narrow marina slip or circling back for a rider, you stay in total control.

Key Features Ri Series

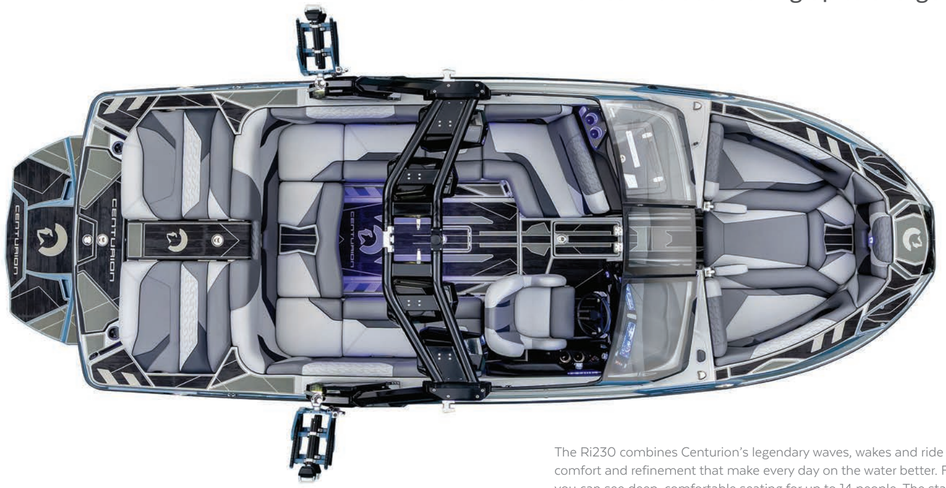
It’s easy to see why the Centurion Ri Series is popular. From comfortable bow seats that let riders stretch out to the optional SURROUNDFIRE sound system, the Ri Series is loaded with thoughtful features and options.

Look closer and the details add up. Two-layer GatorStep flooring and an optional tower-top color on the available Predator Power Tower (PPT) let you match every accent to your color scheme. The Saber Auto Tower comes standard, and for more shade and style, the Ri offers two optional upgrades. The PPT, pictured here, with a nine-foot convertible bimini and an optional SewLong Shade Sail covers almost the entire length of the boat in shade, plus an HD Range of View camera mounted high on the tower for a clear look at the boat, the rider and everything around you. The new Maneuver Auto Tower is also available.

The Ri230

The Ri230 Model

The 23-foot Centurion Ri230 is the sweet spot for boaters who want serious performance without moving up to a larger boat.



Boat Length	Seating Capacity	Fuel Capacity	Total Ballast
23'	14 People	81 Gallons	5400 Lbs

The Ri230 combines Centurion's legendary waves, wakes and ride with the space, comfort and refinement that make every day on the water better. From above, you can see deep, comfortable seating for up to 14 people. The standard Saber Auto Tower folds at the push of a button, while the optional Maneuver Auto Tower, shown here, adds an articulating bimini for style, performance and sun protection. The Captive Touch HD dash puts intuitive control at your fingertips, and the Range of View camera system keeps an eye on everything from the water ahead to the rider behind you.

The Ri245 Model

The Centurion Ri245 gives serious wake sports enthusiasts the space and comfort of a 24.5-foot boat without compromising the top-tier performance they demand.

With seating for up to 16 and 5,650 pounds of ballast, the Ri245 is built to perform even when fully loaded. Seven optimized ballast zones keep the Ri245 balanced and level, creating the long, powerful, clean waves riders want. The overhead view shows the room you get for a full crew and all their gear. Behind the wheel, the Captive Touch HD dash puts intuitive control at your fingertips, while the available Predator Power Tower by Roswell adds effortless push-button control, unmatched style and shade at any time of day.

The Nv Series

Premium Waves. Practical Price.

The 2027 Centurion Nv Series brings championship-level surf performance to three ideal sizes, at price points that make world-class waves accessible to more riders.

The Nv213, Nv233 and Nv243 deliver Centurion's proven performance in 21'3", 23'3" and 24'3" configurations, with more value built in for 2027. Every model features the Opti-V Hull, the ZZ5 5.3L engine and the Fast Mover Ballast System, whose high-flow SeaFlo pumps fill 68% faster. The Silent Stinger Wake Plate shapes clean waves and wakes as well as brings the interior noise level down to that of a kitchen dishwasher. Premium standard features include the Saber Auto Tower with Leverage Bimini by Protomet, a two-color GatorStep deck and riser and a waterproof wireless phone charger. Whether you're progressing your skills or bringing the whole crew, the Nv Series makes more days on the water count.

Key Features Nv Series

The Saber Auto Tower (SAT) with Leverage Bimini by Protomet comes standard on every 2027 Nv Series model, folding away at the push of a button and delivering nearly nine feet of shade.

It's far more than a basic tower, with convenient touches from life vest hangers to side tow hooks. The new step-up transom step makes climbing back aboard easier than ever. Below the surface, QuickSurf Pro fine-tunes the wave, while the Fast Mover Ballast System fills 68% faster and optional RAMFILL[2] keeps the water flowing, so you spend more time riding. And the optional Centurion Surge Thruster System takes maneuverability to a pro level.

The Nv213

The Nv213 Model

The Nv213 puts Centurion's world-class surf performance within reach in a purpose-built 21-foot surf boat that never compromises the waves, wakes or ride.

Built on the proven Opti-V Hull and powered by the ZZ5 5.3L engine, the Nv213 is ready to elevate every set. The Fast Mover Ballast System fills 68% faster, and the Silent Stinger Wake Plate makes it easy to dial in your wave while communicating at inside-voice levels. Add optional RAMFILL² "The Baller" and Plug-N-Play ballast to boost capacity to 4,900 pounds. The standard Saber Auto Tower by Protomet adds effortless operation and sleek style, and there's seating for up to 12. The Nv213 brings Centurion performance to more riders and more days on the water.

Boat Length
21' 3"

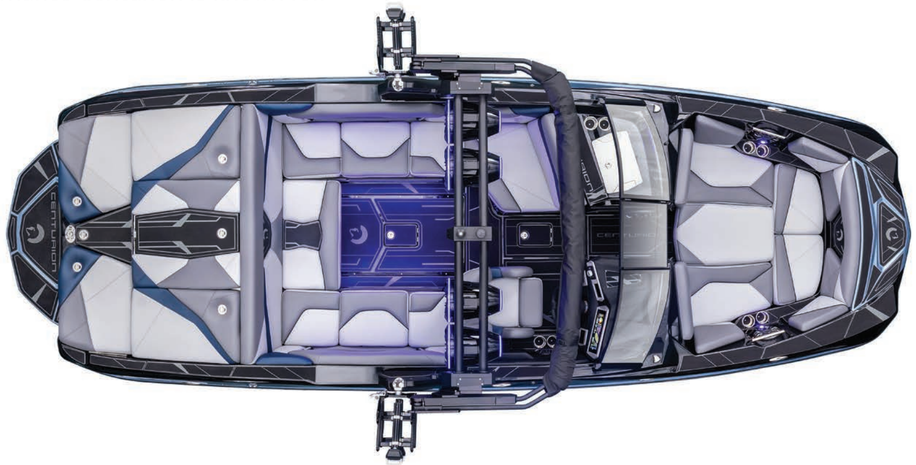
Total Ballast Available
4900 Lbs

The Nv233 Model

The Nv233 delivers the extra room and capacity of a 23-foot boat with the purpose-built surf performance Centurion is known for.



At 23 feet, the Nv233 seats up to 14 and carries up to 5,000 pounds of ballast. The Opti-V Hull, QuickSurf Pro and Silent Stinger Wake Plate combine for a smooth, adjustable ride and clean, powerful waves, while the Fast Mover Ballast System's 13.5 gallon per minute SeaFlo pumps fill fast. Add optional RAMFILL² to fill more than half the ballast in under 90 seconds. The standard Saber Auto Tower by Protomet adds effortless operation and sleek style, and the new step-up transom makes getting back aboard easier.

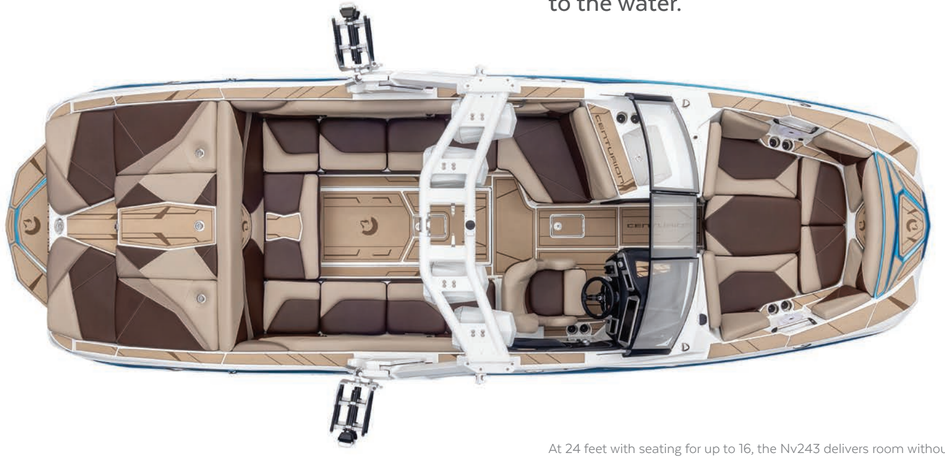
Boat Length	Seating Capacity	Fuel Capacity	Total Ballast Available
23' 3"	14 People	70 Gallons	5000 Lbs

The Nv233

The Nv243

The Nv243 Model

The Nv243 gives larger crews the space, comfort and Centurion surf performance to bring more people, more gear and more fun to the water.



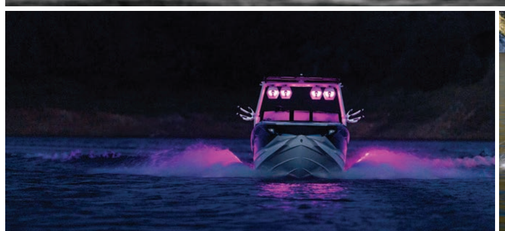
Boat Length
24' 3"

Seating Capacity
16 People

Fuel Capacity
70 Gallons

Total Ballast Available
5200 Lbs

At 24 feet with seating for up to 16, the Nv243 delivers room without sacrificing the performance enthusiasts expect. The Fast Mover Ballast System's 13.5 gal/min SeaFlo pumps fill 68% faster, and the standard Saber Auto Tower by Protomet adds effortless operation and sleek style. Engineered for performance and built for versatility, the Nv243 gives families and crews more room without stretching the budget. Every detail is designed to maximize time on the water and make every outing count.



CENTURION

HANA

CENTURION

The Opti-V Hull

The Secret Sauce Beneath the Surface.

The Opti-V Hull is one of the key design elements behind Centurion's approach to wake sports, balancing a smooth deep-v ride with the lift and stability needed for consistent wakes and waves.

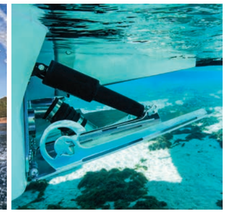
Rather than simply flattening the hull, Centurion uses strategically placed lifting triangles at the rear corners to lift the boat's heaviest area out of the water. The result is a balanced running attitude that reduces side-to-side weight sensitivity and builds symmetrical wakeboard wakes and surf waves quickly, on either side. The 20-degree transom deadrise preserves the smooth rough-water ride and added displacement of a deep-v. Hook at the transom helps the boat run level before the wake plate engages, while extended lifting triangles and a flattened outside chine further refine handling and surf performance. On the RS Series, those refinements go further still, with a carefully tuned running surface that levels-up the ride and delivers elevated performance Centurion is known for.

Ballast System

We Do It Differently.

Centurion doesn’t just add ballast. We engineer it into the boat, distributing weight evenly from bow to transom, low and hidden beneath the floor. That even distribution sets Centurion apart.

The result is a balanced running attitude that minimizes bow rise, improves driver visibility and helps create longer, stronger surf waves, like the one forming behind this RS at dusk. With weight spread throughout the hull, every seat stays comfortable, the engine works more efficiently and the ride stays smooth. More than half of the ballast sits below the floor, built in at the factory as shown here, preserving lockers and under-seat storage and keeping the cockpit open. The subfloor system even extends through the walk-through, helping waves hold their shape from the face to the curl. Then there’s speed. RAMFILL uses a recessed scoop in the running surface to force water into two subfloor tanks through 2-inch stainless-steel ball valves, filling thousands of pounds of ballast in about 90 seconds, without pumps or bags. RAMFILL Boosted on RS and Ri models adds 30-gallon-per-minute SeaFlo pumps to each RAMFILL tank and cuts fill time in half. Whether your captain is operating with the Evo Touch Vision, Captive Touch or Stacked Dash System, ballast control is always a tap away.



The Wave

Create a Surf Spectrum. Make It Yours.

At Centurion, a great surf wave begins with the hull, the weight carried inside it and the way displaced water is managed as it moves past the running surface.

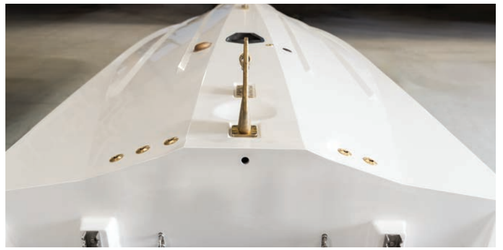
The Opti-V's modified deep-v running surface, combined with strategically placed ballast, creates substantial displacement from bow to stern. Instead of a short pocket of ridable wave, you get a long, powerful face with plenty of push, giving surfers like this one room to move and enough energy to stay connected. The magic happens as that water is shaped behind the boat. The Opti-V Hull sets the foundation, while the Silent Stinger Wake Plate and QuickSurf Pro, work with the hull's natural lift to organize the water into a clean face and defined curl. It's a coordinated system rather than a single trick, producing waves with length, shape and consistency. On larger Centurion models, added hull size and weight bring even more presence without demanding proportional ballast. The result is a wave that gives riders more usable space, consistent push and room to progress, from learning the basics to pushing the limits.

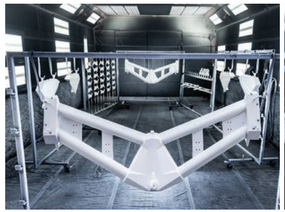
Fuel Efficiency

You Won't Believe Your Instruments.

Performance and fuel efficiency don't always go hand in hand, but Centurion has engineered both into the same package. Much of the credit goes to the Opti-V Hull, whose modified deep-v design cuts cleanly through the water while lift at the transom helps the boat run level front to back.

Less bow rise means less drag, less engine effort and a smoother ride, plus better visibility for the driver. Centurion's Power Pull System takes efficiency a step further. A precisely matched 2-to-1 gear reduction and 17 x 15.5 propeller deliver the low-end pull watersports demand while minimizing engine exertion. The payoff is simple: less fuel burned, fewer trips to the fuel dock and more time riding. Large-capacity fuel tanks extend that freedom even further, making multi-day weekends possible without worrying about the next fill-up. And with live trip data like the distance, fuel used and fuel rate shown on the Stacked Dash System display, you always know exactly where you stand.





The Predator Power Tower

This Tower Brings More Than Just Muscle—It Brings the Party.

The Predator Power Tower (PPT) brings more to the party than a place to hang a wakeboard rope. Its rigid, nine-foot convertible bimini provides full-time shade, while four synchronized LINAK linear actuators raise or lower the tower at the push of a button, keeping the bimini level as it moves.

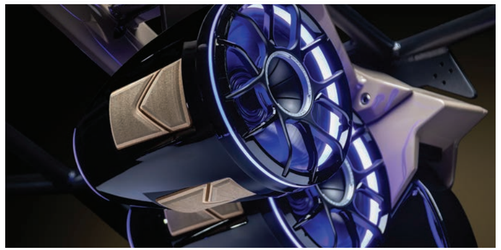
It's as functional as it is striking. Built-in hangers keep wet towels, life vests and ropes organized, while downlighting makes the cockpit easy to see after sunset. Twenty available colors let you coordinate or contrast the tower with your boat. Then turn up the volume: the PPT can be outfitted with premium sound systems from Wet Sounds and Roswell, including the immersive SURROUNDFIRE system. An HD Range of View camera mounted high on the tower delivers a clear view of the boat, riders and surroundings. Standard on the RS Series and optional on the Ri Series, it's a tower designed to make long days on the water more comfortable, more convenient and a lot more fun.

The Saber & Maneuver Towers

Two Towers. One Unmistakable Attitude.

For 2027, Centurion gives owners two distinctive ways to top off their ride: the Saber Auto Tower, standard on every Ri and Nv, and the new Maneuver Auto Tower, available on the Nv and Ri Series. Each delivers nearly nine feet of shade.

The Saber Auto Tower (top and bottom right) pairs precision-machined aluminum with the Leverage Bimini by Protomet. Press and hold the button and the tower folds for bridges, trailering or storage, while the bimini simply tilts out of the way. LED lighting, side tow hooks, folding bimini handles and color-matched GatorStep bases round out the package, and premium Wet Sounds audio and customizable Bombshell racks, like those pictured on this Nv, turn it into a personalized centerpiece. Want more adjustability? The Maneuver Auto Tower (left and right center) pairs the Deep Cover Bimini by Roswell with two LINAK actuators that position the tower at different angles. By articulating the bimini you can adjust your shade on the fly. Integrated tow points, premium audio, customizable Bombshell racks and 39 available tower-shield colors let you tailor it to your boat and personal style.



The Sound Machine

Sound That Rises With the Waves.

Centurion gives you plenty of ways to build the soundtrack for your day on the water. The Wet Sounds 12 Warriors system starts with powerful Rev12 tower speakers in Duo or Quad configurations, while Roswell's DIRECTFIRE R1 Pro speakers offer another high-output option.

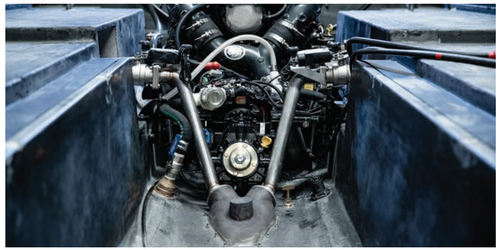
For the ultimate immersive experience, Roswell's SURROUNDFIRE surrounds the boat with music for everyone onboard and out onto the water. Tower-mounted speakers like the one pictured here can send sound straight to the rider, so passengers enjoy their own listening experience while the rider hears the music where it matters most. Packages for the Predator Power Tower include Wet Sounds 12 Warriors, Roswell DIRECTFIRE and SURROUNDFIRE. With a transom remote, Knob Op or the RS Surf Stereo Dial, control is always close at hand. Whether you're cruising, surfing or anchored for the afternoon, Centurion puts the sound exactly where you want it.

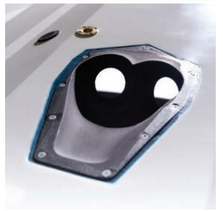
RAMFILL

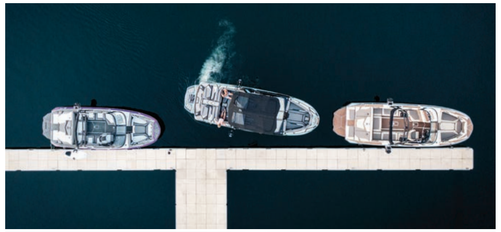
More Time to Enjoy Your Time on the Water.

RAMFILL turns ballast time into surf time. Using the boat's own forward motion and, with RAMFILL Boosted, high-output pumps, Centurion gets thousands of pounds of water aboard quickly, so riders spend less time waiting and more time doing what they came for.

A recessed scoop built into the bottom of the Opti-V Hull, pictured here, captures water as the boat moves and directs it through two-inch stainless-steel valves into subfloor ballast tanks beneath the lounge. The result is up to 3,000 pounds of ballast in about 90 seconds underway, without sacrificing storage or cockpit space. RAMFILL Boosted takes it further on Ri and RS models, adding the 30-gallon-per-minute SeaFlo pumps to the RAMFILL tanks. The pumps can fill or drain the tanks while the boat is idling or sitting still, and working alongside the scoop, they cut fill time in half, to roughly 45 seconds. Whether you're switching riders, changing sports or getting ready for the next set, RAMFILL keeps the day moving.







Surge Thruster System

We Saved You a Spot.

Sometimes the difference between an awkward maneuver and an easy one comes down to a little more muscle exactly where you need it. The Centurion Surge Thruster System (STS) by ezDrive puts 3.75 horsepower of directional thrust at the stern, 87% more than conventional 2-horsepower systems.

A switch on the throttle lets the driver add precise sideways movement without changing course or working the wheel harder, enough to slide neatly into a tight slip. STS draws from its own Interstate Series 31 marine battery, a dedicated power source for low-speed maneuvering. That extra control pays off when approaching a dock, negotiating a busy launch, lining up on the trailer or making a tight turn to collect a rider. Designed specifically for Centurion boats, STS combines useful technology with a clean, integrated look, making tricky boat-handling moments considerably less tricky.

Your Comfort Elevated

Made to Feel Like Home.

The best interiors invite you to settle in and stay awhile. Centurion combines vinyl finishes, thoughtful detailing and extensive customization to create seating that looks distinctive and holds up to life on the water.

Cool Comfort vinyl by Syntec is available across the RS, Ri and Nv Series in a range of colors, textures and finishes. Designed to stay 15–20 degrees cooler to the touch than comparable vinyl, even in darker shades, it keeps seats inviting when the sun is high. RS models offer Colorado Cool Comfort vinyl with a subtle matte, speckled finish, while Ri models add hex and leather-grain textures. Nv interiors offer approximately 16 color combinations across five scheme choices. Underneath it all, Centurion Comfort Strong vinyl offers a 17-mil protective topcoat that resists stains and abrasion, while weather-resistant Teflon thread and reinforced double- and triple-stitched seams, like those pictured here, add durability. Choose your thread color for a custom-finished look. From the first touch to the smallest detail, it's comfort designed around you.

Endless Storage

Keep Everything Within Reach.

Centurion makes room for the gear that comes with a full day on the water, with storage thoughtfully distributed throughout the boat. Bumper pockets keep fenders and ropes tucked away in RS Series boats, while convenient cleats make securing the boat fast and simple.

Observer's storage gives skis, boards and other larger gear a dedicated place, keeping the main seating area open. At the back of the RS Series boats, dual push-button access opens the above-engine storage compartment, making it easy to reach the equipment stowed below. The onboard air compressor adds another useful convenience in the RS Series. The in-floor trash compartment keeps trash out of sight next to an enclosed ice chest, giving drinks and refreshments an easy-to-reach home. With storage built into so many corners, there's less gear underfoot and more room to enjoy the ride.

Making Life Better

We Wake Waves of Positive Change.

We build boats, but our purpose has always been bigger than what rolls out of the factory. Making life better is at the heart of who we are, and it starts with people.

The first responders pictured here stand for the men and women who run toward danger so the rest of us can live, work and play in safety. Through our Salute 2 Service (S2S) events and service charity partners, Centurion gives military members, veterans and first responders a well-earned break: a worry-free day on the water, a wave to ride and a community to share it with. Every Centurion carries a mission with it, making life better.

No company builds its story solo — it takes a group of different talents pulling toward one shared vision. Each part of that group has to shine on its own, but more than that, they have to move together so the final result feels like a single, unified story. That kind of harmony is hard to come by, but at Centurion Boats, it's exactly what fuels the World's best waves, wakes, and rides anywhere. Our thanks go out to everyone who brought the 2027 Centurion Boats catalog to life — our trusted partners, team athletes, ambassadors, and the hardworking employees behind every detail.
